

Project Executable Files

Date	2 July 2026
Team ID	SWTID-2026-3658
Project Name	EduGenie Google Gemini Powered Learning Assistant
Maximum Marks	3 Marks

Project Executable Files

This section includes all the executable and deployable files required to run the EduGenie project successfully. The project is organized with a modular FastAPI backend, Jinja2 frontend, SQLite database, and AI integrations using Google Gemini 1.5 Flash and LaMini-Flan-T5.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA

8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
EduGenie/
|
├── .env.example
├── README.md
├── requirements.txt
├── schema.sql
├── test_backend.py
├── edugenie.db
├──
└── app/
    ├── api/
    ├── database/
    ├── models/
    ├── schemas/
    ├── services/
    ├── static/
    │   ├── css/
    │   └── js/
    ├── templates/
    ├── config.py
    └── main.py
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	edugenie
Login Credentials (Demo)	UserName : Krishna Email : krishna9@gmail.com Password : krishna
Platform / Hosting Provider	Render
Repository Link	github/Gayathritata/EduGenie.git
Demo Video Link	demodrivelink

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Python **3.10** or above
- Internet connection (for AI API access)
- Google Gemini API Key
- Hugging Face API Key (optional for LaMini)

Steps

Step 1: Clone the repository.

```
git clone <repository-url>
```

Step 2: Create and activate a virtual environment.

```
python -m venv venv
```

Step 3: Install the dependencies.

```
pip install -r requirements.txt
```

Step 4: Configure the environment.

Copy .env.example to .env

Add GEMINI_API_KEY

Add HF_API_KEY

Step 5: Run the application.

```
python -m uvicorn app.main:app --reload
```

Step 6: Open the application.

Frontend:

<http://127.0.0.1:8000/>

Swagger API:

<http://127.0.0.1:8000/docs>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI response time depends on external API latency.	Retry the request or ensure a stable internet connection.
2	SQLite is suitable for local development but not large-scale deployment.	Planned migration to PostgreSQL in future versions.
3	Document upload and Retrieval-Augmented Generation (RAG) are not yet implemented.	Planned as a future enhancement using ChromaDB/FAISS.
